For Immediate Release  
October 31, 1991

A Fort Wayne statistical process control (SPC) consultant will offer two courses at the University of Southern Indiana, one on SPC basics and the second on the advanced Taguchi methods. The day-long workshops will be held Wednesday and Thursday, November 13-14, and still have openings.

Brian O. Lanier of Industrial Opportunities, Inc., will be the instructor for both the SPC basics course and "Introduction to Taguchi Methods." The philosophies and tools developed by Genichi Taguchi, which are revolutionizing the product and process engineering departments of American industry and saving companies millions of dollars, are a natural extension of SPC.

Both workshops will include a certification test acceptable to ASQC for recertification. The registration fee is \$125 for each workshop (\$115 each when two or more register together) or a special \$200 fee for both. Call the USI Office of Continuing Education, 812/464-1989, for information or to register.
