COMMUNITY OF SCHOLARS SCHEDULE REVISION. The visit of Dr. Candace B. Pert, a leader in brain biochemistry research who has reached a wide audience through the public television series, "Nova" and "The Brain," has been delayed one day due to a recent schedule conflict for Dr. Pert. She had been slated to participate April 1-2 in a Biology at the Interface program that is part of the Community of Scholars series commemorating USI's attainment of full university status. Her schedule now will be:

- * Wednesday, April 2 -- interdisciplinary lecture on "Brain Receptors: Where Biochemistry Meets Behavior," 9 a.m., Forum I.
- * Fundamental lecture on "Neuropeptides and Their Receptors: A Psychosomatic Network," 11 a.m., Forum I.
- * A special public lecture on "A Chemical Basis for Moods, Emotions, Behavior, and Psychosomatic Health and Illness," 7:30 p.m., UC 350, followed by a reception sponsored by Sigma Xi National Research Society.
- * Thursday, April 3 -- research seminar on "Shared Molecular Components in the Nervous and Immune Systems," 9:30 a.m., Forum II; funded by the Bristol-Myers CNS Research group.
- * All lectures are open to the public; reservations are not needed.

Dr. Pert has been chief of the Section on Brain Biochemistry in the Clinical Neuroscience Branch, National Institute of Mental Health, since 1982. As a graduate student in 1973, she was a discoverer of morphine receptors in the brain and later the body's natural opiates which diminish pain perception. Recently, she and colleagues located receptors for PCP (angel dust) in the brain and receptors for tranquilizers on cells in the immune system. Neuroscientists believe that brain receptors and brain peptides form a communication network between the nervous, endocrine, and immune systems. This network appears to underlie mood, emotion, and behavior as well as psychosomatic health and illness.

Dr. Pert received her A.B. degree (biology, cum laude) in 1970 from Bryn Mawr College and her Ph.D. (pharmacology, with distinction) in 1974 from Johns Hopkins University School of Medicine. She was a research assistant at Johns Hopkins while working on her Ph.D., and was a National Institute

of Health fellow there in 1974-75. She then joined the Biochemistry and Pharmacology Department at NIMH, Bethesda, Maryland, holding the positions of staff fellow, senior staff fellow, and research pharmacologist prior to assuming her current duties. Her major fields of research interest are brain peptides and their receptors: chemical characteristics, brain distribution and function; and the role of neuropeptides in the immune system. She is a member of numerous professional organizations and has published in more than 150 publications.
